

IILM UNIVERSITY, GREATER NOIDA

School of Computer Science and Engineering

AWS Cloud Foundations

A Virtual Internship on Cloud Computing Fundamentals

STUDENT NAME

Aman Raj

ENROLLMENT NUMBER

2410031255

PROGRAM & SEMESTER

B.Tech CSE, 4th Semester (Section 2CSE24)

ORGANIZATION

AWS Academy | EduSkills Foundation (AICTE, Ministry of Education)

Organization Profile

AICTE

All India Council for Technical
Education, Ministry of Education,
Govt. of India

EduSkills Foundation

Not-for-profit initiative — "Nation
Building Through Skills"

National Internship Portal

Official platform connecting
students to verified virtual
internships

AWS Academy

Curriculum & hands-on labs
provided by Amazon Web Services

Introduction & Problem Statement

Introduction

Cloud computing enables on-demand access to computing resources — servers, storage, databases, and networking — over the internet, without owning physical infrastructure.

As part of the B.Tech CSE curriculum, a 10-week virtual internship on Cloud Foundations was undertaken via the National Internship Portal (AICTE), delivered using AWS Academy's curriculum, from April to June 2026.

Problem Statement

Traditional on-premises IT infrastructure demands heavy upfront investment and manual scaling — limiting agility for students and early-stage developers.

A clear gap existed between academic learning and hands-on exposure to industry-standard cloud platforms. This internship addresses that gap through structured, guided, practical exposure to AWS.

Internship Objectives

1

Understand cloud computing deployment & service models (IaaS, PaaS, SaaS)

2

Gain hands-on familiarity with the AWS Management Console

3

Learn Identity and Access Management (IAM) for securing resources

4

Explore AWS compute (EC2) and storage (S3, EBS) services

5

Understand networking fundamentals via Amazon VPC

6

Build a foundation for the AWS Certified Cloud Practitioner exam

Technologies & Tools Used

Amazon EC2

Virtual servers

Amazon S3 / EBS

Object & block storage

AWS IAM

Identity & access mgmt.

Amazon VPC

Isolated cloud networking

Amazon RDS

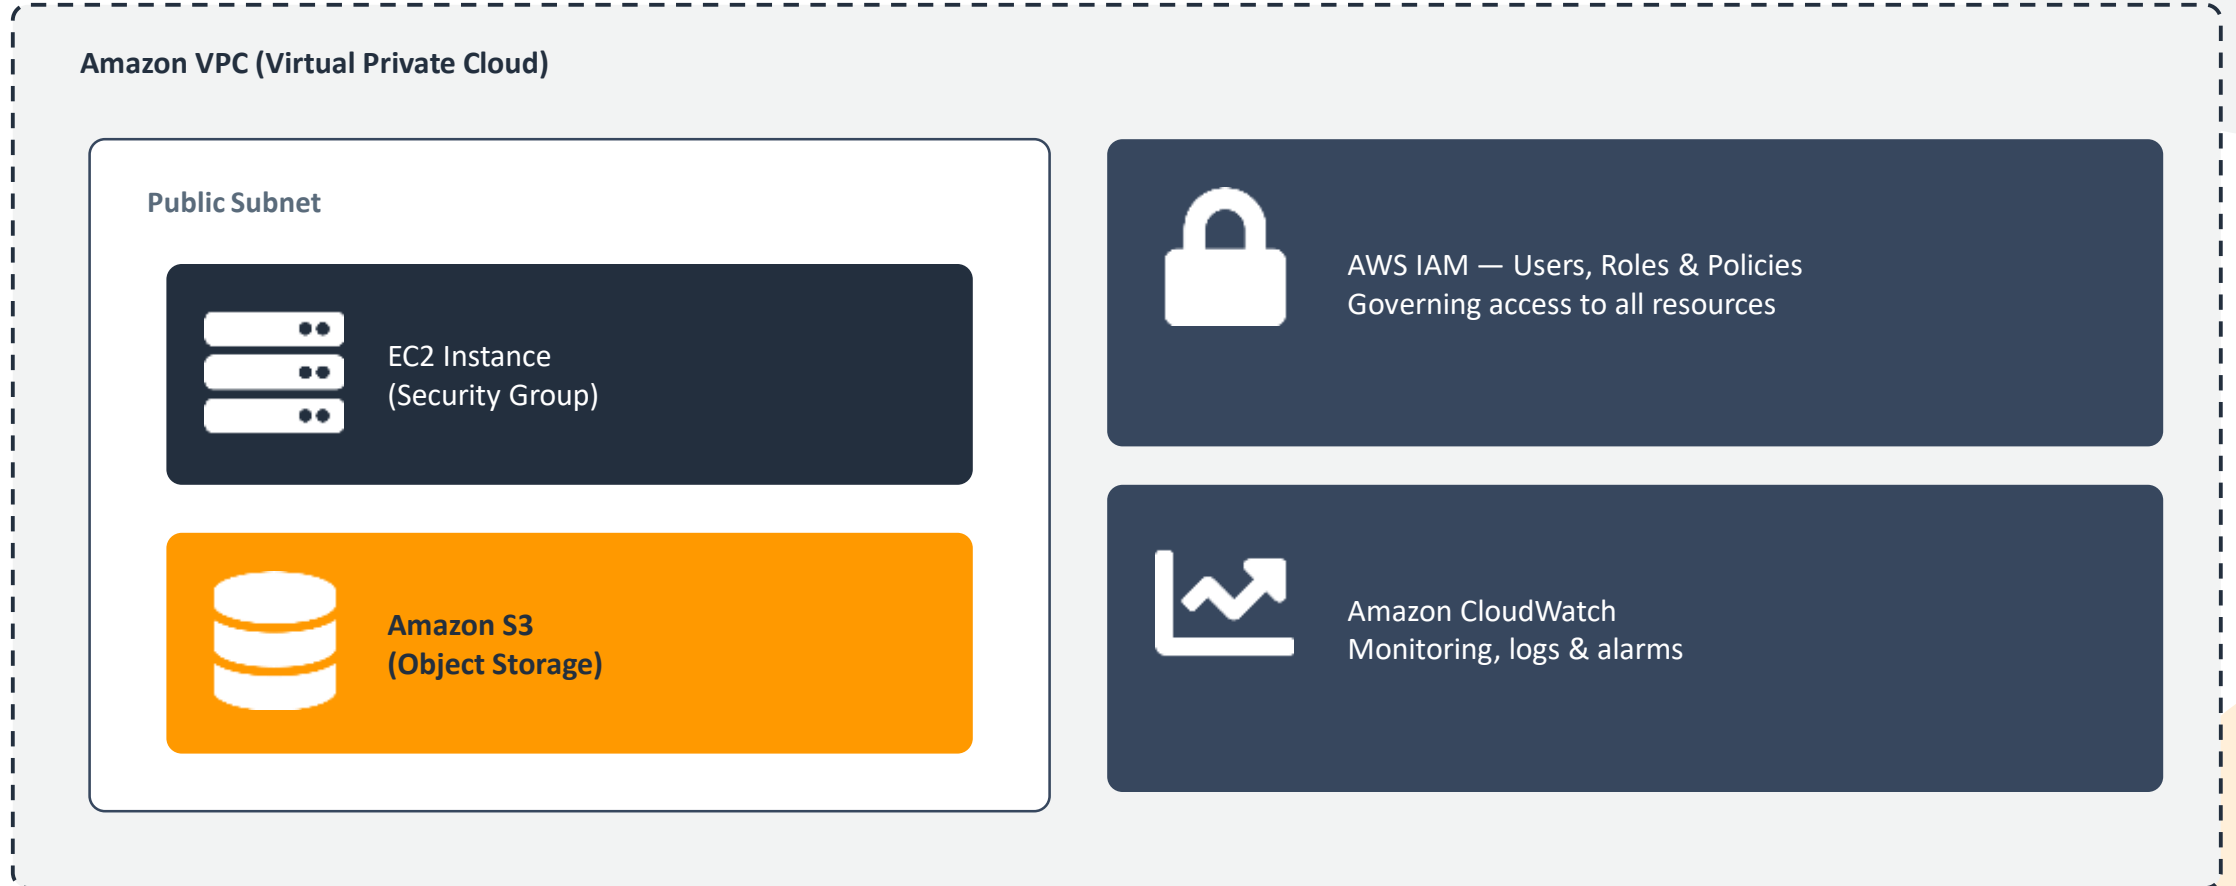

Managed databases

CloudWatch & Billing

Monitoring & cost mgmt.

System Architecture (Foundational AWS Setup)

Methodology — 10-Week Roadmap

Expected Outcomes

Strong conceptual understanding of cloud computing & the AWS ecosystem

Practical familiarity provisioning EC2, S3, IAM & VPC resources

Ability to design secure architecture per the AWS Well-Architected Framework

Readiness to pursue AWS Certified Cloud Practitioner certification

Enhanced employability through industry-recognized cloud exposure

Internship Completion Certificate

Thank You

Aman Raj | 2410031255 | B.Tech CSE, 4th Semester | IILM University, Greater Noida
